AUTOMATIC SOLUTIONS

How to ....

CONNECT AN MD99 AS A EGRESS LOOP

POWER IN FROM CONTROL BOARD

TO CONTROL BOARD OPEN INPUT

LOOP WIRES IN

OFF ← DIPSWITCHES → ON

CHANGE THE DIP SWITCHES TO SUIT A EGRESS LOOP WHICH MEANS WE WANT A "PULSE" LOOP.
AS A VEHICLE DRIVES OVER THE LOOP THE LOOP WILL PULSE ACTIVE TO A CLOSED STATE CAUSING THE LOGIC CONTROL BOARD TO BE CLOSED CIRCUIT ACROSS THE OPEN OR START INPUT.

TURN DIP SWITCH 1 - 3 AND 6 ON - ALL OTHERS OFF
