HOW TO ... Connect battery backup to the BEAUTY

Remove the plastic protective shroud from the BEAUTY logic control. There is a snap out section above the battery connection point that will need to be removed.

Plug one end of the CBY24VBATTBUP harness into the logic control board plug and the other end into the CBY24V module.

You will need to run two wires to an external enclosure to connect the backup batteries to the terminals on the CBY24V module.
